

Network Monitoring & Management

Businesses today need technology solutions from strategic partners that help improve communications, while driving productivity across the enterprise. They also want a reliable, high quality high speed network Internet connection. Businesses are more reliant on their high speed internet connections than ever before. So having an independent NOC (network operations center) that is monitoring all of your public internet connections, regardless of your carrier, is REAL PIECE OF MIND. That's right. What happens now when your internet goes down - can your staff manage the escalation, is YOU'RE BACK UP REALLY UP? Is your Carrier really monitoring themselves when it goes down? Are you confident even if your carrier is monitoring themselves they will move quickly to open a ticket on your behalf? Your business is in a constant state of change, you need a solution that's both easy to learn, and easy to use. A SINGLE PORTAL MONITORING all of your internet Connections.

Today, taking advantage of all the different high speed, Fiber, Coax or Wireless internet options means you probably have more than one provider (or you should). Do you know when one is down or not performing properly or over-utilized? How about after hours? Whether one connection or a 1000 Sites, our NOC TEAM and Centralized Portal will monitor and alert your team or we can fully manage each connection to open and attack any issues. That way, you can focus on your business, not your network.
